

AI Personality Quiz Website

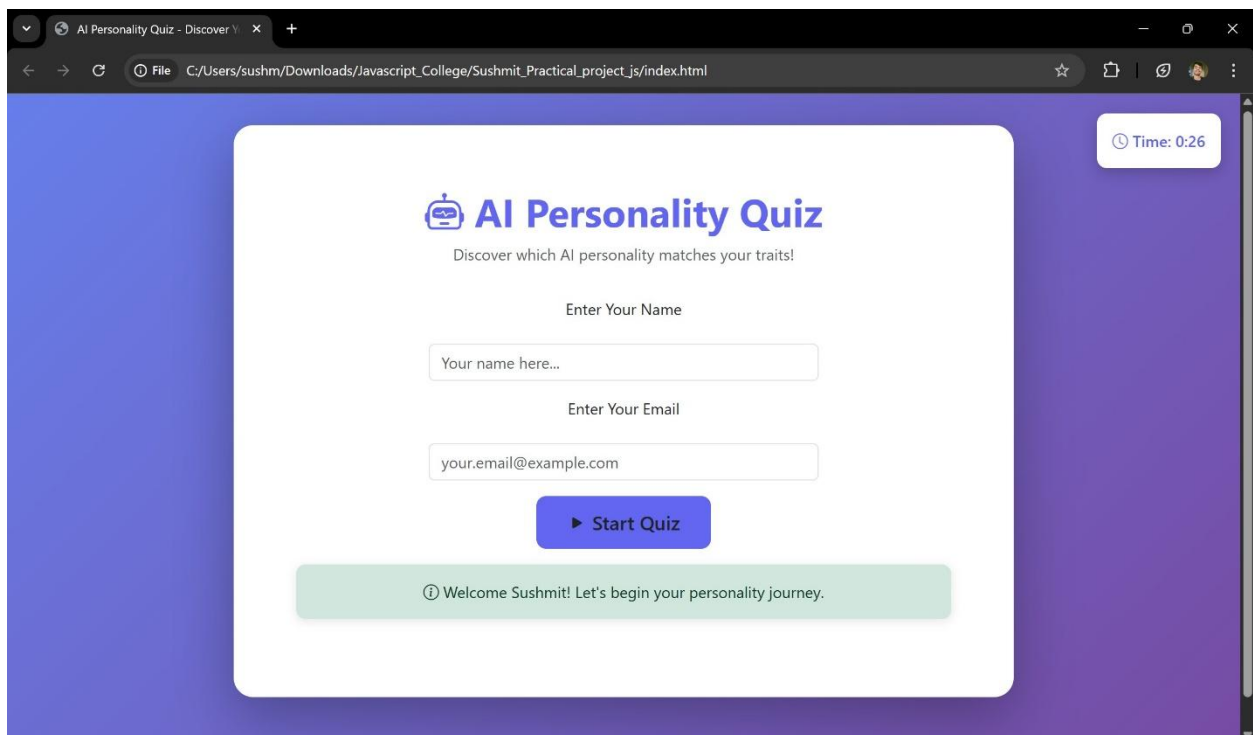

A professional, interactive AI Personality Quiz website built with HTML, CSS, and JavaScript. This project demonstrates comprehensive JavaScript concepts including ES6+ features, DOM manipulation, form validation, web storage, and more.

Project Overview

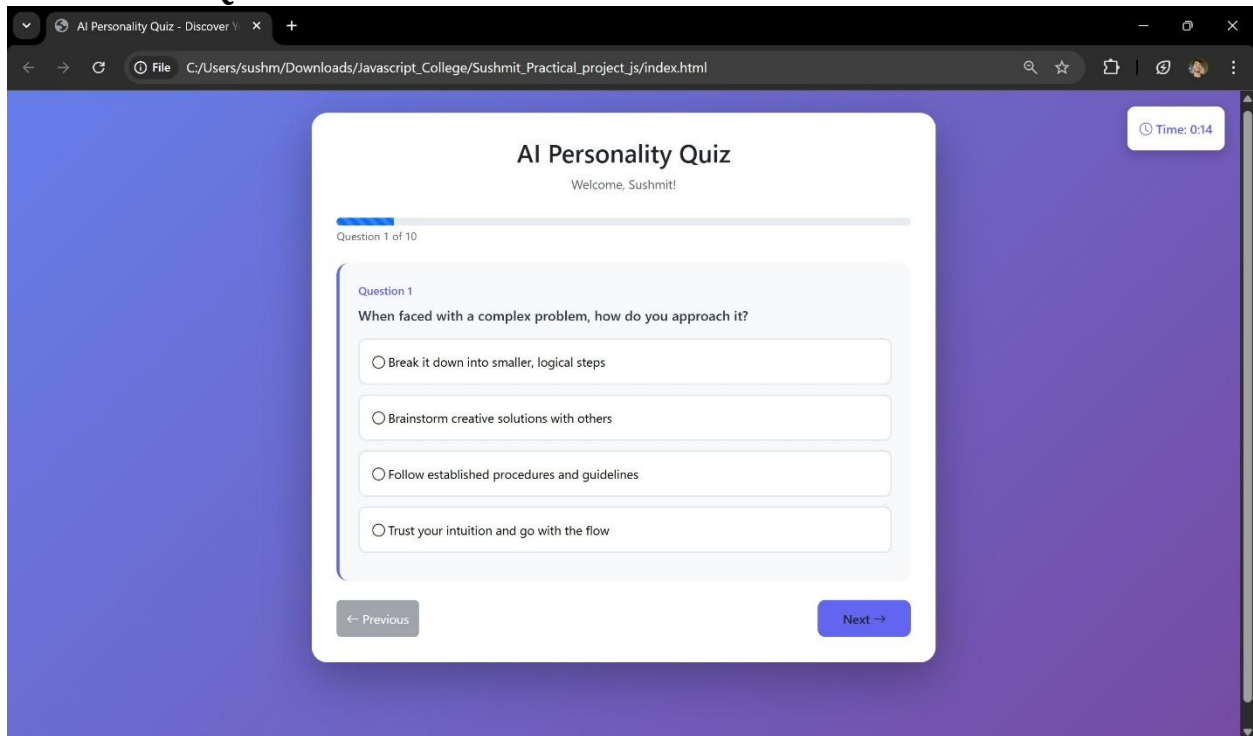

This quiz helps users discover their AI personality type by answering 10 carefully crafted questions. The website features a modern, responsive design using Bootstrap 5 and includes all functionality in a single `index.html` file.

Website Screenshots

Features

- **Interactive Quiz Interface:** 10 personality-based questions with multiple choice answers

- **Real-time Progress Tracking:** Visual progress bar and question counter
- **Timer Functionality:** Tracks time taken to complete the quiz
- **Form Validation:** Real-time validation for name and email inputs
- **Results Display:** Beautiful results page showing personality type, description, and statistics
- **Data Persistence:** Uses localStorage and sessionStorage to save user preferences and results
- **Responsive Design:** Works seamlessly on desktop, tablet, and mobile devices
- **Professional UI:** Modern gradient design with smooth animations

File Structure

Sushmit_Practical_project_js/

```

├── index.html           # Single file containing all HTML, CSS, and
JavaScript
└── README.md           # Project documentation

```

Technologies Used

Frontend Framework & Libraries

- **Bootstrap 5.3.0:** CSS framework for responsive design and UI components
- **Bootstrap Icons 1.11.0:** Icon library for visual elements

JavaScript Concepts Demonstrated

1. JavaScript Setup and Developer Tools

-  Inline JavaScript (onclick attributes in HTML)
-  Internal JavaScript (script tags in HTML)
-  External JavaScript (demonstrated with embedded data structure)
-  Console methods:
 - console.log() - General logging
 - console.error() - Error logging
 - console.table() - Tabular data display
 - console.trace() - Stack trace logging
-  User environment info logging

2. Variables, Data Types & ES6+ Features

-  Variable declarations: var, let, const
-  Template literals (backticks and \${})
-  Destructuring (objects and arrays)
-  Default parameters in functions
-  Spread operator (...)

- ☒ Arrow functions

3. Conditionals, Loops & User Input

- ☒ if-else statements
- ☒ switch-case statements
- ☒ for loops
- ☒ while loops (implicit in setInterval)
- ☒ forEach() loops
- ☒ Form input handling
- ☒ Input validation

4. Functions, Scope & Error Handling

- ☒ Function declarations
- ☒ Function expressions
- ☒ Arrow functions
- ☒ Function scope and block scope
- ☒ Closures
- ☒ try-catch blocks for error handling
- ☒ Error logging and fallback values

5. Arrays & Objects with Higher-Order Functions

- ☒ Array methods:
 - push() - Adding elements
 - map() - Transforming arrays
 - filter() - Filtering arrays
 - reduce() - Reducing arrays to single value
 - forEach() - Iterating over arrays
- ☒ Object arrays handling
- ☒ Nested object structures

6. String Methods & Regular Expressions

- ☒ String methods:
 - split() - Splitting strings
 - match() - Pattern matching
 - replace() - String replacement
 - indexOf() - Finding positions
 - trim(), toLowerCase(), toUpperCase()
 - charAt(), slice()
- ☒ Regular expressions for:
 - Email validation

- Name validation
 - Vowel counting
- ☒ String manipulation and processing

7. DOM Traversal and Manipulation

- ☒ getElementById() - Element selection
- ☒ querySelector() - Advanced selection
- ☒ createElement() - Dynamic element creation
- ☒ appendChild() - Adding elements
- ☒ innerHTML - Content manipulation
- ☒ textContent - Text updates
- ☒ classList manipulation (add, remove)
- ☒ Dynamic UI updates

8. Form Handling & Validation

- ☒ Form element access
- ☒ Event listeners:
 - onSubmit - Form submission
 - onBlur - Field blur events
 - onChange - Value change events
- ☒ Real-time validation
- ☒ Input sanitization
- ☒ Error message display
- ☒ Form state management

9. Web Storage and State Management

- ☒ localStorage - Persistent storage
 - Saving user preferences
 - Storing quiz results
 - Loading saved data
- ☒ sessionStorage - Session-based storage
 - Tracking quiz session state
- ☒ JSON serialization/deserialization
- ☒ State persistence across page reloads

10. JSON Handling and Mini API Mock

- ☒ JSON data structure (quizData object)
- ☒ JSON parsing with JSON.parse()
- ☒ JSON stringification with JSON.stringify()

- ☒ Simulated API calls using `setTimeout()`
- ☒ Promise-based data loading
- ☒ Async/await patterns
- ☒ Dynamic data display

11. Timers and Dynamic UI

- ☒ `setInterval()` - Recurring timer for quiz clock
- ☒ `setTimeout()` - Delayed execution
 - Quiz start alerts
 - Auto-dismissing notifications
- ☒ Timer management (start, stop, update)
- ☒ Dynamic UI updates based on time

Design Features

- **Modern Gradient Background:** Purple gradient theme
- **Card-based Layout:** Clean, organized sections
- **Smooth Animations:** Fade-in effects and transitions
- **Progress Indicators:** Visual progress bar
- **Responsive Grid:** Stats grid that adapts to screen size
- **Icon Integration:** Bootstrap Icons throughout
- **Color-coded Sections:** Different colors for different states

Personality Types

The quiz determines one of four AI personality types:

1. **Analytical** 📊 - Logical, data-driven, detail-oriented
2. **Creative** 🎨 - Innovative, imaginative, artistic
3. **Systematic** 🏗️ - Organized, reliable, structured
4. **Intuitive** ❤️ - Empathetic, adaptive, people-oriented

How to Use

1. **Open the Website:** Simply open `index.html` in any modern web browser
2. **Enter Information:** Fill in your name and email on the welcome screen
3. **Take the Quiz:** Answer all 10 questions by selecting your preferred option
4. **View Results:** See your AI personality type, description, and statistics
5. **Retake Quiz:** Click “Take Quiz Again” to restart

Data Storage

- **User Information:** Stored in `localStorage` for returning users
- **Quiz Results:** Last 10 quiz results saved in `localStorage`

- **Session State:** Current quiz session tracked in sessionStorage

Browser Compatibility

- Chrome (latest)
- Firefox (latest)
- Safari (latest)
- Edge (latest)
- Opera (latest)

Code Organization

The code is organized into clear sections: - Quiz data structure - JavaScript concepts (11 main sections) - DOM manipulation functions - Event handlers - Utility functions

Learning Outcomes

This project demonstrates: - Complete JavaScript fundamentals - Modern ES6+ syntax - DOM manipulation techniques - Form validation best practices - Web storage API usage - Timer and async operations - Error handling patterns - Code organization and structure

License

This project is created for educational purposes as part of a JavaScript practical project.

Author

Created as part of JavaScript College Practical Project demonstrating comprehensive JavaScript concepts.

Note: All code is contained in a single `index.html` file for easy deployment and demonstration purposes.
